

Press Release: Clean2Go

Clean2Go – The environmentally safe and effective screen cleaner for Commercial Aircraft.

Clean2Go touchscreen cleaner was originally developed for Eurocopter to clean and maintain helicopter windshields and cockpit displays. Following years of successful use in Eurocoptors, Dassault fighter aircraft, and Nokia, T.Oesterwinter GmbH & Co KG received Certificates AMS 1535 B and AMS 1550B Certification for Clean2Go from the Boeing testlaboratory SMI/Miami for use on commercial aircraft.

Clean2Go is ideally suited for the cleaning; protection and long-term maintenance of touch screens used in IFE's. Most commercial touch screens are steamed with thin oleo and hydrophobic coating during manufacture. That coating dissolves quickly through cleaning which leaves the touch screens more exposed to dirt and oily fingerprints. Clean2Go allows end-users to easily clean the screen and protect against streaking and fingerprints for better swiping and visual experience. Cleaning and polishing takes less than 1 minute and lasts approximately 2-3 days.

The formula is non-toxic, absolutely safe and dermatological friendly. Clean2Go does not contain any alcohols such as isopropyl alcohol, which are aggressive and flammable. Clean2Go can safely be used on all IFE's, tablets, smart phones, heads- up displays and cockpit avionics that are used in commercial aircraft.

Beyond Aerospace , Clean2Go is recommend for all areas where touch screens are heavily used and need to stay clean – airport information kiosks, medical monitors, retail pos screens, and of course all major consumer touch screen tablets and laptops.
